Past performance should not be taken as an indication of future performances. Portfolio values can go up as well as down.

Portfolio objective and investment policy

The main objective of the **Core US Dollar Cautious Income Portfolio** is to provide investors with a regular income. The portfolio also aims to preserve capital. The Core US Dollar Cautious Income Portfolio targets a distribution yield (not guaranteed) of 2.0% over the 10 year US Treasury yield, before fees. The portfolio seeks diversification within an unrestricted asset class through active asset management. Underlying investments typically consist of long-only UCITS V compliant Collective Investment Schemes.

We believe a structured and disciplined investment process is central to our endeavour to deliver good returns. Our Investment Committee meets regularly to review and select individual funds within each of the various investment markets. This culminates in our recommended list of investments, from which the Core US Dollar Cautious Income Portfolio is constructed and monitored, so as to take advantage of any tactical ideas and 'special situations' that may be appropriate to enhance performance or to return a consistent level of income in line with our main objective.

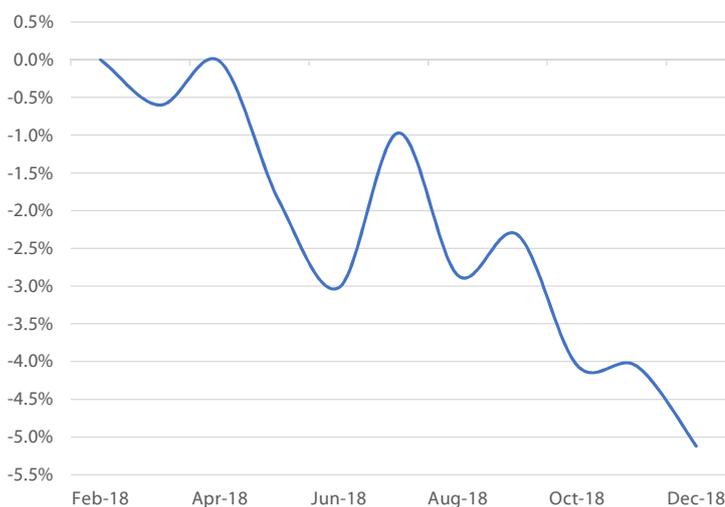

Portfolio performance

	1 Month	3 Month	6 Month	Year to date	Since Launch

Manager's commentary

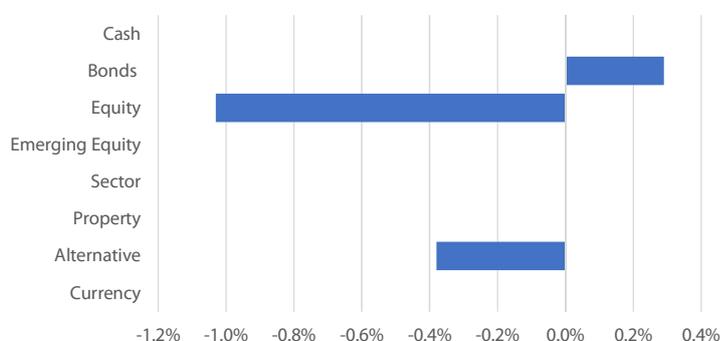

The wall of worry that gripped the financial markets since October culminated in one of the most challenging December in the history of the financial markets. In fact the US equity markets registered the worst Christmas Eve performance ever. Almost all asset allocations in 2018 lost money - US cash being the only exception. This made for one very difficult year for most asset managers no matter the strategy used. The main topics of focus for the month remained the same as for the last six months - Brexit, trade wars, global economy and monetary policy.

In the UK there does not seem to be any progress made on a final Brexit deal as parliament is unlikely to vote through the UK/EU agreement as proposed by Theresa May. On the trade war front some progress was achieved between the US and China but doubts remain on the feasibility of such plans and the final agreement to be reached. In the meantime the extension of the tariff imposition seems to be hitting the Chinese economy. Overall the global economy is still in an expansionary phase but the rate of expansion seems to have slowed down. From a monetary policy point of view the ECB confirmed the termination of QE in December whilst a war of words developed between Donald Trump and the chairman of the Federal Reserve on whether there should be more rate hikes and at what pace. The Fed seems to have softened their stance on rate hike increases for 2019.

Monthly underlying fund performance

Legg Mason WA Macro Opp. Bond Fund	3.27%

TECHNICAL TERMS

The **10-Year U.S. Treasury Yield** tends to signal investor confidence. When confidence is high, the 10 year treasury bond's price drops and yields go higher because investors feel they can find higher returning investments and do not feel they need to play it safe.

Drawdown is a risk measure used to evaluate how long it typically takes an investment to recover from a temporary decline in its net asset value.

The **Sortino ratio** measures the risk-adjusted return of the investment portfolio. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.

IMPORTANT INFORMATION

The **estimated distribution yield** reflects the amounts that may be expected to be distributed over the next 12 months based on the income generated from the underlying funds. Investors may be subject to withholding tax on the quarterly distributions.

The **portfolio charges** the management and nominee fees to the quarterly distributions, which fees can be offset by any rebates the Company may receive. Rebates are paid back in the form of a credit note. This charging method could lead to a lower level of income but will not constrain capital

This service attracts a **Cautious to Moderate** risk. The lowest category does not mean risk free. Fluctuations in exchange rates may cause the value of your portfolio to rise or fall.

This rating does not reflect the possible effects of unusual market conditions or large unpredictable events which could amplify everyday risk and trigger other risks such as counterparty risk, liquidity risk, country risk.

The full list of the portfolio's risk are contained in the 'General Risks' section of the *Core US Dollar Cautious Income Portfolio* Information Document.
