Portfolio objective and investment policy

The main objective of the **Core US Dollar Moderate Growth Portfolio** service is capital preservation with the potential of capital growth. The target annualised rate of return, which rate is not guaranteed, (based on a timeframe of at least 5 years) is in the range of +4% to +7% with volatility levels within the historic standard deviation levels and a target maximum peak to valley losses not exceeding 12%.

To achieve this objective the Core US Dollar Moderate Growth Portfolio will be invested in a diversified range of assets with the primary placements within UCITS Collective Investment Schemes managed by the most reputable global asset managers. The expertise provided by these managers added to the asset allocation and risk management knowledge provided by Integra Private Wealth ensure dual control in terms of structural and market risk. This portfolio will invest primarily in USD denominated or USD hedged assets although investments in other currencies can be placed as a hedge or as a speculative currency position.

Manager's commentary

The wall of worry that gripped the financial markets since October culminated in one of the most challenging December in the history of the financial markets. In fact the US equity markets registered the worst Christmas Eve performance ever. Almost all asset allocations in 2018 lost money - US cash being the only exception. This made for one very difficult year for most asset managers no matter the strategy used. The main topics of focus for the month remained the same as for the last six months - Brexit, trade wars, global economy and monetary policy.

In the UK there does not seem to be any progress made on a final Brexit deal as parliament is unlikely to vote through the UK/EU agreement as proposed by Theresa May. On the trade war front some progress was achieved between the US and China but doubts remain on the feasibility of such plans and the final agreement to be reached. In the meantime the extension of the tariff imposition seems to be hitting the Chinese economy. Overall the global economy is still in an expansionary phase but the rate of expansion seems to have slowed down. From a monetary policy point of view the ECB confirmed the termination of QE in December whilst a war of words developed between Donald Trump and the chairman of the Federal Reserve on whether there should be more rate hikes and at what pace. The Fed seems to have softened their stance on rate hike increases for 2019.

Year-to-date cumulative performance

Monthly fund performance figures reflect average returns in the base currency across all managed portfolios net of underlying fund management fees.

Monthly underlying fund performance

Schroder ISF Global Gold Fund	7.66%
Legg Mason WA Macro Opps. Bond Fund	3.73%

BGF Euro Markets Fund	-0.28%

Contribution to performance by asset class

TECHNICAL TERMS

The **US Dollar LIBOR interest rate** is the average interbank interest rate at which a large number of banks on the London money market are prepared to lend one another unsecured funds denominated in US Dollars.

Drawdown is a risk measure used to evaluate how long it typically takes an investment to recover from a temporary decline its net asset value.

The **Sortino ratio** measures the risk-adjusted return of the investment portfolio. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.
