## Portfolio objective and investment policy

The main objective of the **Core US Dollar Cautious Income Portfolio** is to provide investors with a regular income. The portfolio also aims to preserve capital. The Core US Dollar Cautious Income Portfolio targets a distribution yield (not guaranteed) of 2.0% over the 10 year US Treasury yield, before fees. The portfolio seeks diversification within an unrestricted asset class through active asset management. Underlying investments typically consist of long-only UCITS V compliant Collective Investment Schemes.

We believe a structured and disciplined investment process is central to our endeavour to deliver good returns. Our Investment Committee meets regularly to review and select individual funds within each of the various investment markets. This culminates in our recommended list of investments, from which the Core US Dollar Cautious Income Portfolio is constructed and monitored, so as to take advantage of any tactical ideas and 'special situations' that may be appropriate to enhance performance or to return a consistent level of income in line with our main objective.

## Portfolio performance - inclusive of income

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	YTD
<b>2018</b>			-0.60%	0.58%	-1.86%	-1.14%	2.05%	-1.89%	0.54%	-1.73%	-0.01%	-1.06%	<b>-5.08%</b>

## Manager's commentary

As the Omicron variant continues to cast gloom over festivities for a second year, financial markets seem to be looking beyond the short-term disruptions and into a brighter future. 2021 ends with strong gains on most risk-on assets posting double digit gains for most. Inflationary pressure remains a concern especially in view of the Fed's chair comments suggesting that the term "transitory" with regard to inflation should be retired, opening the way to an accelerated tapering. In fact, the annual US inflation rate accelerated to 6.8% in November. This could mean higher interest rates in a shorter time frame than originally anticipated. The median FOMC member is now ready to start a new interest rate hiking cycle in 2022. In contrast, the ECB retained its stance. With the euro zone further away from full employment, the ECB will remain accommodative, and the consensus seems to be that no interest rate hikes will occur before mid-2023. The euro zone economy grew by 2.2% QoQ during Q3 2021, matching initial estimates. Meanwhile in China, manufacturing activity continued to expand, by a slim margin. China called for tighter restrictions to control an outbreak in Xi'an, pointing to the challenges of holding the COVID-19 zero line against the spread of Omicron.

Against this backdrop, active portfolio management will remain key to achieve the best risk/reward ratios and our various portfolio service reflect this. We urge investors to read through the recently published Q4 review and 2022 outcome for further information.

## Monthly underlying fund performance

Threadneedle US Equity Income Fund	4.89%
Aegon Global Equity Income Fund	4.62%
Aegon Diversified Income Fund	3.53%
Legg Mason WA Macro Opp. Bond Fund	2.12%

### TECHNICAL TERMS

The **10-Year U.S. Treasury Yield** tends to signal investor confidence. When confidence is high, the 10 year treasury bond's price drops and yields go higher because investors feel they can find higher returning investments and do not feel they need to play it safe.

**Drawdown** is a risk measure used to evaluate how long it typically takes an investment to recover from a temporary decline its net asset value.

The **Sortino ratio** measures the risk-adjusted return of the investment portfolio. It is a modification of the Sharpe ratio but penalizes only those returns falling below a user-specified target or required rate of return, while the Sharpe ratio penalizes both upside and downside volatility equally.

### IMPORTANT INFORMATION

The **estimated distribution yield** reflects the amounts that may be expected to be distributed over the next 12 months based on the income generated from the underlying funds. Investors may be subject to withholding tax on the quarterly distributions.

The **portfolio charges** the management and nominee fees to the quarterly distributions, which fees can be offset by any rebates the Company may receive. Rebates are paid back in the form of a credit note. This charging method could lead to a lower level of income but will not constrain capital

This service attracts a **Cautious to Moderate** risk. The lowest category does not mean risk free. Fluctuations in exchange rates may cause the value of your portfolio to rise or fall.

This rating does not reflect the possible effects of unusual market conditions or large unpredictable events which could amplify everyday risk and trigger other risks such as counterparty risk, liquidity risk, country risk.

The full list of the portfolio's risk are contained in the 'General Risks' section of the *Core US Dollar Cautious Income Portfolio* Information Document.
